

iiote starts cooperation with Sigma Technology for Internet of Things

Gothenburg 2018-05-03

iiote and Sigma Technology starts cooperation where Sigma experts will support iiote in their mission of accelerating the development of Internet of Things (IoT) with advanced technologies.

The Swedish government works towards making Sweden the best in the world when it comes to using digitalization opportunities (source: Regeringskansliet, digitalization politics). Some essential attributes of such digital society are high connectivity, predictability, and effective diagnostics. iiote shares this vision and works actively to develop high-performing IoT solutions and provide IoT consultancy for their customers.

Sigma Technology has substantial experience in the area of Internet of Things, both by providing consulting services and conducting research projects, such as Internet of Things and People center, the "From empowering to viable living" project and many others.

iiote works with the Internet of Things and the goal is to speed up the development of IoT using energy efficient Low Power Wide Area Networks (LPWAN). iiote operates within two business areas; IoT Consulting Services and IoT Solutions. iiote is working with multiple IoT solutions and has recently launched a system for moisture measurement and leakage monitoring in bathrooms and kitchens, as well as a system for monitoring all types of doorways, doors and gates. These solutions are done in locations where it was previously impossible or been limited and too expensive with existing technologies. More innovative IoT solutions are currently in operation and will officially be launched later this year.

iiote - make sense of IoT

About iiote

iiote work with companies, organizations and municipalities in implementing IoT in their business, from analysis need and strategy to planning, implementation and system integration. iiote has expertise in IoT, IT and Telecom, combined with industry-specific skills from the construction, machinery and automotive industries. iiote integrates solutions that drive the development of simple and innovative IoT in the community. This is enabled by radio systems that use low-energy technology, Low Power Wide Area Networks (LPWAN). For more information, visit www.iiote.com.

About Sigma Technology

Sigma Technology is a part of Sigma Group and is a global supplier of product information, embedded and software design, and offshore development. We are experts with a passion for technology and information, and take pride in delivering quality and constantly improving our deliveries. Our philosophy is "Local Drive – Global Strength", therefore we have offices worldwide to be close to our customers. For a complete picture, visit sigmatechnology.se.
