iioote launches StartIoT an IoT Starter Kit that enables users to quickly get started with LPWAN
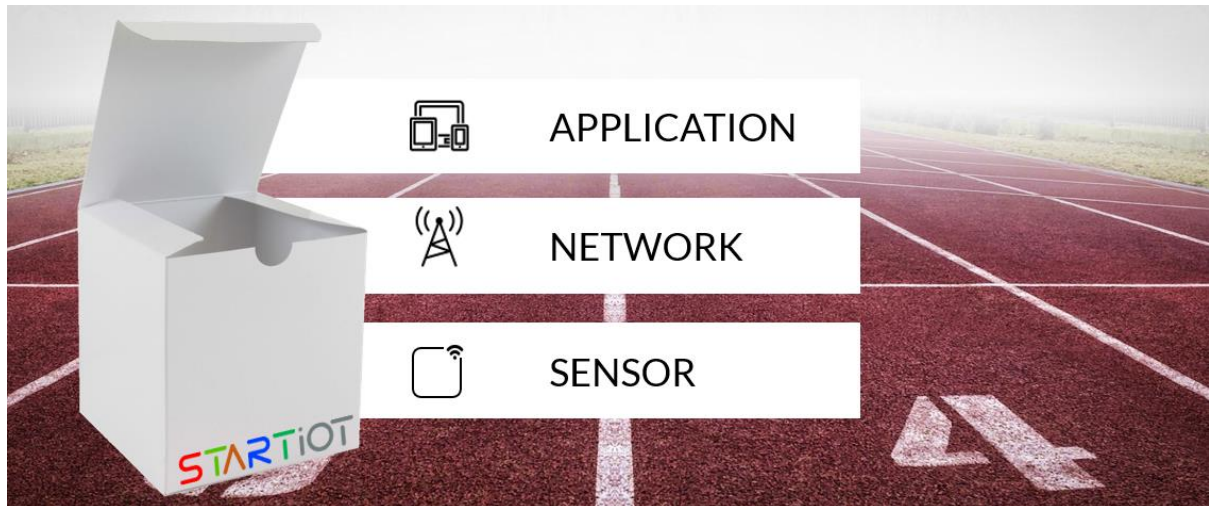

Gothenburg 2018-05-21

iioote has put together a starter kit that enables testing of IoT sensors in a very simple way using the market-leading LPWAN standard LoRaWAN™

iioote helps companies, municipalities and organizations choose the right IoT technology and now further simplify things with a starter kit that includes sensors, access to IoT network (Gateway) and an application for data presentation. The starter kit comes preconfigured and will work out-of-the-box with all measurement data sent through the cloud to your computer and mobile.

- We have put together the starter kit based on solid knowledge after many years' experience of testing sensors and enabling multiple Proof-of-Concepts (PoC) around the world in several different areas. The purpose of StartIoT is to enable more companies and organizations to start testing IoT in an easy and cost-effective way. No deep level expert knowledge is required to get started. The starter kit works immediately after the gateway power cord is plugged in and when required iioote can assist customers with customizations. We will continue to develop this starter kit to suit even more customer groups, says Bertil Moberg, Head of IoT Solutions at iioote AB.

For more information go to our website at http://www.iioote.com/en/startiot/

iioote contributes to Sweden's goal to be the best in the world to use the potential of digitalization.

About iioote AB

iioote work with companies, organizations and municipalities in implementing IoT in their business, from analysis need and strategy to planning, implementation and system integration. iioote has expertise in IoT, IT and Telecom, combined with industry-specific skills from the construction, machinery and automotive industries. iioote integrates solutions that drive the development of simple and innovative IoT in the community. This is enabled by radio systems that use low-energy technology, Low Power Wide Area Networks (LPWAN).
